Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: regarding claims 1-33, prior art of record fails to teach, or render obvious, alone or in combination, a network communication system that provides textual communication and call transferring between nodes within the system. The network communication system may further communicate with a remote device. The system also includes the capability to simultaneously notify a plurality of nodes of an incoming call. These features provided by the network communication system are designed to benefit the deaf and/or speech impaired. The network communication system may include a local computer that may be a node within the system. A call may originate with the local computer or be generated by a remote device that is in communication with the local computer. The local computer generates a call indicator that is transmitted to a plurality of the nodes simultaneously. Selection of the nodes may be based on user inputs or by predefined groupings. Each node receiving a call indicator is configured to generate a ring message in response. The ring message may be displayable on an output device to alert a node user to the incoming call. The ring message may further include identification data that identifies the call. The identification data may include the origination of the call, the name of the caller, or even the name of the call. In response to the ring message, a node user may choose to accept or decline the call.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
